

SANTOR UNG52 Speech Protector

The Santor UNG52 Speech Protector enables you protect your private conversations from voice recorders, microphones, and direct human listening.

The SANTOR UNG52 speech protector is presently the most sophisticated device on the market to protect your confidential conversations. Nowadays, no one is shielded from recorders or audio microphones (cell phones, tablet computers, digital voice recorders, wireless or wired microphones, etc.): They are everywhere. During an important business meeting, we must ensure the protection of our pieces of oral information so that they remain confidential. A voice recording could be used as a blackmailing tool, and can even destroy a reputation. Our system can easily blend into any environment, and enables you to have a highly protected conversation with your interlocutors.

- Simple to use device
- Two protection modes
- Very discreet-looking
- Can be personalized
- Operated by red app

The UNG52 enables you to protect your private conversations from:

Voice recorders (analog or digital), clandestine listening devices (wireless or not)

Direct human listening, via stethoscope and much more

Smartphones, computer/tablet applications, and microphones

Bluetooth switch (located underneath the unit) for multi-device management (MDM) and easy control via the SANTOR UNG52 APP.

SANTOR
INNOVATIVE SECURITY SOLUTIONS

SANTOR UNG52 Speech Protector

The SANTOR UNG52 is a non-invasive countermeasure system to use during meetings to prevent information leaks and lower the risks of being recorded.

Designed and manufactured in Canada, our product is of industrial quality.

Main speaker for the acoustic protection mode

Two protection modes

Ultrasonic mode:

It emits a barely audible noise, thereby ensuring ultimate discretion. It highly reduces the risks of being listened in or recorded by the majority of audio microphones on the market, including very sophisticated mini-recorders: Edic Mini, Gnome, Nagra, etc., and all major smartphone brands including the iPhone X, Samsung Galaxy 8, Google Pixel, and more.

* The ultrasonic noise level is equivalent to the sound of a commercial alarm or to music in a club (120 dB*)

Acoustic mode:

It emits a voice scrambling mix, audible to the human ear, which can be personalized with the UNG52 app. It insures the highest protection against forensic cleaning softwares and sophisticated devices. Furthermore, this mode ensures a protection from human/electronic listening (someone listening in or any stethoscope or contact microphone on the wall).

You can either use one or multiple units for larger coverage, which can be controlled simultaneously (managed) via Bluetooth with our UNG52 free app. It can be permanently installed on the ceiling with two screws, with a T-Bar Clip for drop ceiling rails, or on a tripod; it can also be placed in the middle of a conference table.

The SANTOR UNG52 Speech Protector is designed to blend into a conference room and discreetly protect your vocal conversations during your meetings.
